DIGITAL LITERACY

PROJECT REPORT

Name : Mahi Gupta

Registration number : 25BCE10912

Branch : B.Tech CSE (Core)

Year : 2025-2029

Course code : CSE0001

Date : 26 -03-2026

Introduction

This project is a part of the Digital Literacy course in which we have to assume the role of a Student Digital Ambassador. The main goal of the project is to assist in the development of knowledge about the right and effective use of digital tools in our academic and professional lives. In the present digital world, it is of great importance for students to have basic knowledge of online platforms, communication, and safety.

The project is divided into five tasks, each of which covers various aspects of digital literacy. The tasks include developing an infographic, developing a digital portfolio focusing on coding and collaboration tools, developing knowledge of professional email writing, and developing knowledge of cybercrime awareness.

The tasks in the project assist in the development of essential knowledge and skills such as developing a professional online presence, communicating effectively, and being safe from online threats. This project has helped in the development of knowledge and awareness of the right and effective use of digital technology.

Task : 1

Which tool I used :

I have used Canva for creating my infographic, and it was a delightful experience for me to design it. I choose topic for creating the infographic is "Digital Literacy" and how it is important for students in today's digital world. In creating the infographic I have included information such as the concept of digital literacy, tools such as Google Docs, YouTube, Canva, and Zoom; internet safety; maintaining a professional online image; and email etiquette..

What my design shows :

While designing, I have tried to include everything in a clear and easy-to-understand format using short points, icons, and a simple color theme, The infographic presents how students can use technology effectively, safely, and communicate politely. The infographic includes simple tips like the use of strong passwords, avoiding unknown links and the use of polite language while sending emails.

One thing I found difficult or interesting while making it:

One difficulty I faced was organizing all the information neatly without making the design look crowded. However, it was interesting to try different layouts, and this activity improved my creativity and understanding of digital literacy

THINK SMART, STAY SAFE ONLINE

1

WHAT IS DIGITAL LITERACY ?

- Ability to use digital tools effectively
- Find and evaluate information online
- Communicate responsibly on digital platforms
- Essential skill for learning and future careers

2

USEFUL DIGITAL TOOLS FOR STUDENTS

- Google Docs – for writing
- YouTube – for learning
- Canva – for designs
- Zoom/Meet – for online classes.
-

3

SAFE INTERNET PRACTICES

- Keep passwords strong.
- Avoid unknown links
- Be kind online
- Don't share personal info

4

PROFESSIONAL ONLINE PRESENCE

- Share positive content
- Be respectful in posts
- Think before you post

Use real name and good photo.

5

EMAIL ETIQUETTE

- Check before sending
- Write clear subject
- Start politely (Dear Sir/Ma'am)
- Keep it short and neat.

Task – 2

I created my student digital portfolio using Git-Hub, LinkedIn, and Kaggle. These platforms help in building a professional online presence and are widely used by students and professionals.

GITHUB
The primary use of GitHub is sharing, and I have created my profile's README. In this, I have mentioned my branch, year, and interest in learning new technologies.

LINKEDIN
LinkedIn is a professional networking site, and I have created my profile, where I have mentioned my educational details, i.e., my B.Tech in CSE from VIT Bhopal, along with the year of my expected graduation.

KAGGLE
Kaggle is useful for learning data science and exploring datasets. I created my profile to explore datasets and improve my analytical thinking .

While creating these profiles I realized the significance of creating a professional online presence. In the coming four years, I plan to maintain my GitHub profile by posting projects, stay active on LinkedIn to increase connection and use Kaggle to enhance my skills and It would help me to grow and acquire new skills while preparing for internships and future employment opportunities.

Task – 3

In this task, I was involved in both coding practice and Google workspace tools. To begin with, I created an account on HackerRank where I solved a simple problem for beginners. The problem was easy but it helped me grasp the nature of coding problems and how to be logical in tackling them step by step. It also helped me be more confident in writing simple codes.

After that, I created a Digital Literacy Awareness Quiz using Google Forms. In this, I added five questions, which include multiple choices, checkboxes, and short answer questions. In addition, the form was connected to Google Sheets which made it easy to collect the data and understand it. The form can be used for surveys, quizzes and academic purposes.

In general terms, this assignment was extremely beneficial for me. I learned how coding platforms can assist me in honing my skills through practice. I also learned how Google tools can be used for surveys, data collection, and sharing of information. I am sure these skills will be of immense use to me in the future as I plan to use these skills frequently to improve my knowledge and productivity.

Task – 4

Part A: Professional Emails

In this task two professional emails were composed. The first email is a request to professor for an extension in the submission of the assignment. The email contained a subject line, greeting, explanation of the request, and closing. The second email is to an internship coordinator expressing interest in an internship. The email expressed the student's interest and willingness to learn and also contained a request for more information.
The emails were composed in a formal style and were well structured and clear. This task aided in the comprehension of professional communication through email which is a crucial aspect for the advancement of the student.

Part B: Social Media Checklist

A list of Do’s and Don’ts for the responsible use of social media was developed and It included critical issues such as the safeguarding of personal data avoidance of the sharing of false content, the use of strong passwords, and the exercise of respect in the virtual world.
This checklist can be helpful for students in college who wish to be safe online and have a good online image.

Reflection on Digital Communication

In such cases of poor digital communication serious issues may arise. For instance, a student may send a message regarding a group project without clearly stating the deadline and other details of the task to be performed. Some members of the group may not understand the details of the task while others may think they are supposed to perform different tasks. As a result the entire group loses marks for not completing the task properly.

This is due to poor communication through the message sent to the members of the group. The message was not clear and did not contain the necessary details.

In order to avoid such issues the message should be clearly written and contain all the necessary details such as the deadline and details of the tasks to be performed.

Proper and clear communication is of paramount importance to avoid such issues and errors..

Task -5

In such cases of poor digital communication serious problems may also occur. For example, a student may send a message related to a group project without clearly stating the deadline and other details of the task to be performed. Some members of the group may not know the details of the task to be performed while others may assume they have to perform different tasks. Thus entire group loses marks for failing to perform the task correctly.

This is because of poor communication while sending message to the members of the group. The message was not clear and did not include the necessary details.

In order to avoid such problems and errors it is important to write a clear message that includes all the necessary details such as the deadline and the details of the tasks to be performed.

Proper and clear communication is of paramount importance in order to avoid such problems and errors.

This helped me understand that being careful online is as important as being technically skilled. One of the things I will personally do differently is being more careful while making online payments and checking my messages. Earlier, I did not verify my online payments and suspicious messages. However now I know the risks associated with it. Henceforth I will be more careful and double-check my transactions and other things. This activity has helped me understand the importance of being careful online.

Conclusion

This project has helped me understand the need for digital literacy in a practical sense. Through various tasks and assignments as I have learned how to present myself professionally on the internet, communicate effectively through emails and make use of various digital platforms for learning and collaborating. I have also become sensitive to the issue of internet safety and cybercrime.

One of the most beneficial aspects of this project was the opportunity to use these concepts in real life situations not just learning them theoretically and I also learned the importance of being responsible while using digital tools.

This project helped me gain more confidence in using digital tools and I feel I am prepared for the academic and professional environments I will be in the future.

The skills I learned from this project will be beneficial to me throughout my college life.
