DIGITAL LITERACY

PROJECT REPORT

Name : Mahi Gupta

Registration number : 25BCE10912

Branch : B.Tech CSE (Core)

Year : 2025-2029

Course code : CSE0001

Date : 26 -03-2026

Introduction

This project is a part of the Digital Literacy course, where we were given the role of a Student Digital Ambassador. The main objective of this project is to help us understand how to use digital tools effectively and responsibly in both academic and everyday life. In today's digital world, having basic knowledge of online platforms, communication, and safety is very important for students.

The project consists of five tasks, each focusing on different aspects of digital literacy. These include creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, learning professional email writing, and understanding cybercrime awareness. All the work is organized in a GitHub repository along with a detailed project report.

Through these tasks, we learned important skills like maintaining a professional online presence, communicating properly, and staying safe from online threats. Overall, this project helped in improving both practical knowledge and awareness about responsible use of digital technology, which will be useful in future studies and career.

Task : 1

Which tool I used :

I created my infographic using Canva, which made the design process simple and enjoyable. My topic is digital literacy and its importance for students in today's digital world. In the infographic, I included sections such as the meaning of digital literacy, useful tools like Google Docs, YouTube, Canva, and Zoom, safe internet practices, maintaining a professional online presence, and basic email etiquette.

What my design shows :

While designing, I tried to keep everything clear and easy to understand by using short points, icons, and a clean color theme. The infographic shows how students can use digital tools effectively, stay safe online, and communicate respectfully. It also gives simple tips like using strong passwords, avoiding unknown links, and writing polite emails.

One thing I found difficult or interesting while making it:

One difficulty I faced was organizing all the information neatly without making the design look crowded. However, it was interesting to try different layouts, and this activity improved my creativity and understanding of digital literacy.

THINK SMART, STAY SAFE ONLINE

1

WHAT IS DIGITAL LITERACY ?

- Ability to use digital tools effectively
- Find and evaluate information online
- Communicate responsibly on digital platforms
- Essential skill for learning and future careers

USEFUL DIGITAL TOOLS FOR STUDENTS

- Google Docs – for writing
- YouTube – for learning
- Canva – for designs
- Zoom/Meet – for online classes.

2

SAFE INTERNET PRACTICES

- Keep passwords strong.
- Avoid unknown links
- Be kind online
- Don't share personal info

3

PROFESSIONAL ONLINE PRESENCE

- Share positive content
- Be respectful in posts
- Think before you post

Use real name and good photo.

4

EMAIL ETIQUETTE

- Check before sending
- Write clear subject
- Start politely (Dear Sir/Ma'am)
- Keep it short and neat.

5

Task – 2

I created my student digital portfolio using Git-Hub, LinkedIn, and Kaggle. These platforms help in building a professional online presence and are widely used by students and professionals.

GITHUB
GitHub is mainly used for sharing projects and code, and I have created my profile README where I mentioned my branch, academic year, and my interest in learning new technologies.

LINKEDIN
LinkedIn is a professional networking platform, where I added my education details, including my B.Tech in Computer Science from VIT Bhopal and my expected graduation year.

KAGGLE
Kaggle is useful for learning data science and exploring datasets. I created my profile to explore datasets and improve my analytical thinking .

While setting up these profiles, I understood how important it is to present myself professionally online. Over the next four years, I plan to regularly update my Git-Hub with projects, stay active on LinkedIn to build connections, and use Kaggle to improve my practical skills. This will help me grow, learn new skills, and prepare for internships and future job opportunities.

Task – 3

In this task, I worked on both coding practice and Google Workspace tools. First, I created an account on HackerRank and solved a beginner-level problem. It was a simple challenge, but it helped me understand how coding questions work and how to think logically step by step. It also gave me more confidence in writing basic programs.

After that, I created a Digital Literacy Awareness Quiz using Google Forms. I added five questions, including multiple choice , checkboxes and short answer types. I also linked the form to Google Sheets so that responses could be collected and viewed easily. This made it simple to organize and understand the data. It can be used for surveys, quizzes, and academic purposes .

Overall, this task was very useful for me. I learned how coding platforms can help me improve my skills with practice. I also understood how Google tools can be used for surveys, data collection, and sharing information. These skills will definitely help me in my studies and future projects. I plan to use them regularly in the future to enhance my knowledge and productivity .

Task – 4

Part A: Professional Emails

In this task, two professional emails were written. The first email was a request to a professor asking for an extension on an assignment submission. It included a clear subject line, polite greeting, reason for the request, and a respectful closing. The second email was written to an internship coordinator expressing interest in a summer internship. It highlighted the student's interest, willingness to learn, and included a proper request for further information.

Both emails were written in a formal tone, with proper structure and clarity. This task helped in understanding how to communicate professionally through email, which is an important skill for academic and career growth.

Part B: Social Media Checklist

A checklist of Do's and Don'ts for responsible social media use was created. It included important points like protecting personal information, avoiding sharing false content, using strong passwords, and maintaining respectful behavior online.

This checklist is useful for college students to stay safe and maintain a positive digital presence.

Reflection on Digital Communication (100–150 words)

Poor digital communication can sometimes lead to serious problems. For example, imagine a student sending a message in a group project without clearly mentioning the deadline and task details. Some group members misunderstand the instructions, while others assume different responsibilities. As a result, the final submission is incomplete and the whole group loses marks.

This situation happens because the message was not clear and lacked proper details. The student also did not confirm whether everyone understood the instructions.

To avoid this, the message should have been written clearly with all necessary information like deadline, task division, and expectations. Asking for confirmation from group members would also help. Clear and proper communication is very important to avoid confusion and mistakes.

.

Task -5

While researching this topic, what surprised me the most was how easily people can become victims of cybercrime due to small mistakes. I always thought such frauds required advanced technical skills, but in reality, many scams simply take advantage of human trust and lack of awareness. Things like clicking on an unknown link or entering a UPI PIN without thinking can lead to serious financial loss within seconds.

This made me realize that being careful online is just as important as having technical knowledge. One habit I will personally change is being more cautious while making online payments and checking messages. Earlier, I did not always verify payment requests or suspicious links, but now I understand the risks involved.

From now on, I will make sure to double-check every transaction, avoid sharing sensitive information, and stay more alert while using digital platforms.

Overall this activity increased my awareness about online safety and the need for responsible digital behaviour.

Conclusion

This project helped me understand the importance of digital literacy in a practical way. Through different tasks, I learned how to create a professional online presence, communicate effectively through emails, and use various digital platforms for learning and collaboration. It also made me more aware of online safety and the risks of cybercrime.

One of the most useful parts of this project was applying these concepts in real-life situations, rather than just studying them theoretically. I also realized how important it is to be responsible and careful while using digital tools.

Overall, this project improved my confidence in using digital technologies and prepared me for future academic and professional environments. The skills I gained from this project will be helpful throughout my college life and career.
